

First time be a solo winner, I must say there is luck in winning the competition.

My best result is a heavy ensemble with LGB and NN.

1. Data

2. Model

for NN model, all data fillna(0) and using nn.utils.rnn.pack_padded_sequence to pad.

I have to look for my early stage model, sorry for small font size in figure.

update: I release a clean code at <https://github.com/jxzly/Kaggle-American-Express-Default-Prediction-1st-solution>.

note: You may not be able to reproduce the best result due to random fluctuations.
